

Linux Commands: grep and sed

This document contains notes, syntax, and examples for grep and sed commands in Linux.

1. grep Command

grep stands for *Global Regular Expression Print*. It is used to search text or patterns inside files.

Basic Syntax

grep pattern filename

Command	Purpose
grep apple test.txt	Search lines containing 'apple'
grep -i apple test.txt	Ignore case
grep -n apple test.txt	Show line numbers
grep -c apple test.txt	Count matches
grep -v apple test.txt	Show non-matching lines

2. sed Command

sed stands for *Stream Editor*. It is used to edit and transform text in files.

Basic Syntax

sed 'operation' filename

Command	Purpose
sed 's/apple/orange/' file.txt	Replace first occurrence
sed 's/apple/orange/g' file.txt	Replace all occurrences
sed -i 's/apple/orange/g' file.txt	Edit file directly
sed '2d' file.txt	Delete line 2
sed -n '3p' file.txt	Print line 3
sed '/^\$/d' file.txt	Delete blank lines
sed -i 's/\r\$//' file.sh	Remove CRLF characters

3. grep vs sed

Command	Purpose
---------	---------

grep	Searches text or patterns
sed	Edits or transforms text
